B.Tech — Computer Science & Engineering | AKTU, 2025

PROFESSIONAL SUMMARY

Computer Science graduate currently building foundational knowledge in AI/LLM workflows and evaluation methods — drawn to how structured testing, rubric-based thinking, and data-validation skills apply to assessing model outputs for accuracy, relevance, and consistency. Hands-on frontend and full-stack development experience using React.js, JavaScript, Node.js, HTML5, and CSS3, building responsive, cross-browser UI components and full-stack platforms with real-time validation and API integration. Skilled at applying structured, rubric-driven thinking to assess quality, accuracy, and consistency, from validating SQL datasets to executing test cases against defined requirements and tracking defects through resolution. Comfortable in fast-paced, metrics-driven environments, with strong attention to detail, analytical reasoning, and clear written and verbal communication. Proficient in Microsoft Office and Google Workspace, with experience handling structured and unstructured data and collaborating across teams.

TECHNICAL SKILLS

- Programming Languages: JavaScript, C, SQL
- Web Development: HTML5, CSS3, Tailwind CSS, REST APIs
- Databases: MySQL, SQL (CRUD, query optimisation, data validation)
- Cloud & DevOps: AWS (Cloud Practitioner Certified), Git, GitHub
- Concepts: OOP, DBMS
- Tools: Excel, Microsoft Office, VS Code, GitHub Actions
- Soft Skills: Analytical Thinking, Root Cause Analysis, Cross-team Collaboration, Problem Solving

PROFESSIONAL EXPERIENCE

LLM Prompt Engineering & Evaluation Portfolio

June 2026 – July 2026

- Designed and optimised 50+ structured prompts for diverse NLP tasks including summarisation, question answering, code generation, reasoning, and information extraction
- Evaluated LLM outputs using accuracy, relevance, consistency, hallucination detection, and response quality metrics to improve prompt performance.
- Built a reusable prompt library with zero-shot, few-shot, chain-of-thought, and role-based prompting techniques.
- Automated prompt testing and benchmarking using **Promptfoo** to compare multiple prompt variations and improve response quality.
- Documented prompt design patterns, evaluation results, and optimisation strategies in a GitHub portfolio with reproducible experiments.
- Improved response reliability by iteratively refining prompts based on evaluation metrics and qualitative feedback.

Associate IT Recruiter — ICONMA LLC

June 2025 – July 2026

- Sourced and screened candidates for IT positions using job portals such as LinkedIn, Naukri, and internal databases.
- Evaluated candidates against defined technical and cultural-fit criteria, applying consistent judgment across a high volume of profiles.
- Managed end-to-end recruitment — sourcing, screening, interview scheduling, and follow-ups — for clients including Apple and Salesforce.
- Maintained candidate records and recruitment pipelines in the Applicant Tracking System (ATS) with strong attention to detail.
- Managed multiple job requisitions while meeting hiring deadlines and recruitment targets in a fast-paced, metrics-driven environment.

Web Development Intern — Main Flow Services and Technology

Aug 2024 – Oct 2025

- Executed functional and regression test cases against defined requirements, identifying defects and validating application behaviour for accuracy and consistency before deployment.
- Reviewed and validated structured SQL datasets for accuracy and consistency, improving data reliability for reporting and monitoring.
- Analysed application logs and debugging outputs to assess system behaviour against expected results, flagging inconsistencies for resolution.

- Collaborated with developers to track defects through structured workflows, verify fixes, and confirm adherence to quality benchmarks.
- Built and validated multi-tier web features using JavaScript, React.js, Node.js, and SQL — applying structured thinking to ensure functional correctness.
- Implemented and tested responsive, cross-browser UI components against requirements across devices and platforms.

PROJECTS

Student Result Management System | *JavaScript · SQL · MySQL · Node.js*

- Built a database-driven system with secure CRUD operations and role-based admin panels for student data management.
- Designed schema with input validation and normalised tables, applying data-quality checks to improve accuracy and retrieval reliability at scale.
- Implemented a secure admin interface for result updates with authentication, mirroring real-world access-control and data-integrity practices.

Organ Donation Web Platform | *React.js · Node.js · HTML5 · CSS3 · REST API*

- Designed and developed a full-stack platform integrating real-time form validation, API integration, and structured workflows.
- Executed functional, usability, and API integration test cases; identified and resolved defects before deployment, achieving zero post-launch critical bugs.
- Enhanced user engagement by 15% through optimised UI/UX design and performance-tuned frontend rendering.

Dynamic Image Gallery Slider | *JavaScript · CSS3 · HTML5*

- Built a responsive, reusable image slider with custom animations and touch/keyboard navigation, verified across browsers for consistent behaviour.

CERTIFICATIONS & ACHIEVEMENTS

- Artificial Intelligence - IBM
- AWS Cloud Practitioner Certificate — Amazon Web Services
- SQL Certificate — Validated expertise in database querying, optimisation, and data management
- Selected for Smart India Hackathon (SIH) 2024 — National-level engineering problem-solving competition
- Bootcamp Participant — IIT Bhubaneswar
- National Creativity Aptitude Test (NCAT) 2021

EDUCATION

B.Tech — Computer Science & Engineering, 2025

Dronacharya Group of Institutions, AKTU

12th — CBSE, Dolphin Public School, 2021

10th — CBSE, Dolphin Public School, 2019
